**VETERINARY REPORT**

Disclaimer: This report and the findings contained herein are solely for the requester and may not be used or relied upon by any other person or entity without the express written consent of Dr Chris Lawler BVSc. The interpretation of radiographic findings, and video endoscopic recordings, may vary with the examiner, method of examination and a horse's changing condition. This is a report of the undersigned's findings on the date indicated. This report is limited to the findings contained herein and no other findings or opinions should be inferred beyond those expressly set forth herein. This report does not constitute a warranty or guarantee of any kind by Dr Chris Lawler BVSc.

Lot: 337

Horse: Almanzor x Dancing Song

Signalment: Brown yearling filly Left = d over a bar Right = 7 over 9

Sale: New Zealand Bloodstock, Karaka, January 2021

Examined at: Cambridge Stud

Requester: Mr Scott Calder

Radiographer: Cambridge Equine Hospital – Dr Rob Hitchcock

Left Fore Hoof: No significant findings.

Left Fore Fetlock: No significant findings.

Left Fore Knee: No significant findings. An ulna carpal bone lucency was noted.

Right Fore Hoof: No significant findings.

Right Fore Fetlock: No significant findings.

Right Fore Knee: No significant findings.

Left Hind Fetlock: There is a 5 x 6.5mm bone cyst in mid distal PI.

Left Hind Hock: There is remodelling on the distal border of the third tarsal bone in the tarsometatarsal joint.

Left Hind Stifle: No significant findings.

Right Hind Fetlock: There is an 8 x 2.5mm type I osteochondral fragment emanating from the plantaroproximal aspect of medial PI.

Right Hind Hock: No significant findings.

Right Hind Stifle: No significant findings.

Comment: Rating this horse as a low, moderate or high risk to develop lameness in one of the radiographed joints or areas I would rate this horse as **low** risk.

Yours sincerely,

Dr Chris Lawler BVSc
